

BLACK WOMEN WITH BREAST CANCER

IN THE NEW YORK METRO AREA

This survey is designed to understand access, affordability, and quality of life/quality of care during the COVID-19 pandemic for Black/African American women with breast cancer in a COVID hotspot.

We want to hear from you about what barriers to diagnosis, treatment, or survivorship care you may have encountered so that we can design programs to improve cancer care.

Study Lead: Sarah Marion

It should take 5 minutes to complete.
