

Pain Management Support Study

Recruiting Volunteers for a Research Study

Do you have cancer pain?

If so, you may be eligible to take part in a study to manage your pain.

What is this research study about?

Cancer pain is difficult to treat and can greatly reduce a person's quality of life. We want to find out if a pain management support program that is verbal-based or music-based is more helpful to reduce cancer pain.

What is involved?

- Take part in 6 weekly 45-minute pain management telehealth sessions.
- At three different time points in the 6-week program, you will be asked to:
 - Fill out questionnaires related to your pain, mood, social support, and beliefs.
 - These testing sessions will take approximately 30 minutes.
- Answer some questions over the phone 1 month after completing the last session.

You will receive \$40 for each of the three study measurements and \$20 for the follow-up phone call, totaling \$140. You will also receive \$20 per treatment session, for an additional total of \$120 for 6 treatment sessions.

Who can participate? You may be eligible to take part if you:

- have stage 3 or 4 cancer
- have cancer pain
- have moderate to severe pain for more than 3 months

Where will the study take place? Remotely via telehealth. Access to a computer with internet or a mobile phone with data or internet is required.

Interested? This research is approved by the Institutional Review Board. If you are interested in participating in this study, please call 267-760 4562 or email pmss@drexel.edu

This research is conducted by a researcher who is a member of Drexel University.
